Haneef Ojutalayo

Senior Software Engineer · MushakTech Ventures · Ibadan, Nigeria (WAT)

biolahaneef@gmail.com · github.com/haneefojay · LinkedIn · x.com/hanyjay05

PROFILE

Senior software engineer building production software across backend systems, full-stack web applications, AI-powered products, and developer tools. I work across languages and stacks and choose technology from the engineering problem — architecture, APIs, databases, distributed processing, AI integrations, frontend applications, infrastructure, and production deployment.

Open to remote software engineering roles, international contracts, and product consulting.

EXPERIENCE

Software Engineer / Full-Stack Engineer, MushakTech Ventures 2022 — Present

Hybrid · Oyo State, Nigeria

- Design and ship products across backend systems, full-stack web applications, AI-powered products, and infrastructure.
- Select languages and architectures from project requirements: APIs, databases, authentication, background processing, integrations, and production web applications.
- Contribute to system architecture, technical decisions, implementation, deployment, and product engineering.
- Work across education, business applications, AI products, and developer tooling.

SELECTED WORK

ExamKeep — CBT platform Lead Software Engineer

Computer-based testing for Nigerian secondary schools, built for modest lab hardware and unstable networks. Multi-tenant school management, versioned question bank with HOD review, batched sittings with per-student shuffling, live exam-day monitoring, offline answer persistence and resume, server-side timing and marking, and audited result publishing. Owned architecture and implementation across backend, database, auth, tenant isolation, background jobs, API contracts, frontend, and production infrastructure.

TypeScript · NestJS · Fastify · Prisma · PostgreSQL · Redis · BullMQ · Next.js · Docker · Turborepo · examkeep.com

EnvDoctor — configuration-contract CLI Creator

Open-source Go CLI that treats environment configuration as a contract. Detects missing variables, misspellings, type/format errors, local/CI/Docker drift, stale examples, and accidental secret exposure. Local-first, read-only by default, never emits secret values.

Go · github.com/haneefojay/envdoctor

Pulse News — aggregator Software Engineer

News aggregation with URL-hash deduplication, asynchronous workers, Redis caching, PostgreSQL persistence, and rate-limit-aware integrations with NewsAPI, The Guardian, and The New York Times. Live PWA deployment.

Python · FastAPI · Celery · Redis · PostgreSQL · JavaScript · PWA

CERTIFICATION

HNG Internship 13 — Finalist, Backend Development 2025

Top 450 of 12,362 interns.

SKILLS

Languages. TypeScript, JavaScript, Go, Python, SQL

Backend and systems. Architecture, API design, REST, distributed and event-driven systems, background processing, auth, PostgreSQL, Redis, NestJS, Node.js, FastAPI, Prisma, SQLAlchemy, BullMQ, Celery, RabbitMQ

Frontend. React, Next.js, TypeScript, Tailwind CSS

Infrastructure. Docker, Linux, VPS, DigitalOcean, AWS, Vercel, CI/CD, GitHub, production deployment

Data and AI. LLM applications, agents, RAG, MCP, OpenAI, Claude, Gemini, Groq, LangChain, LangGraph

Practice. System architecture, monorepos, API contracts, testing, security, performance, documentation, production readiness · **Spoken.** English, Yoruba, Arabic
